

Britannia Leisure Centre Rooftop MUGA and Internal Screen

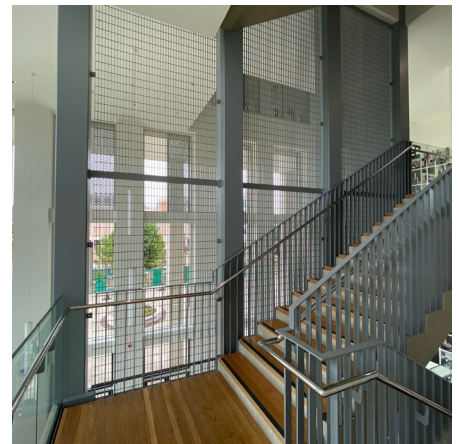

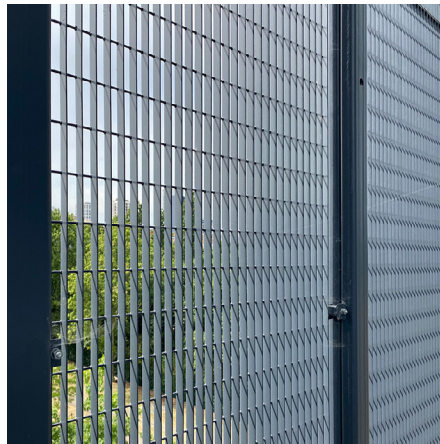

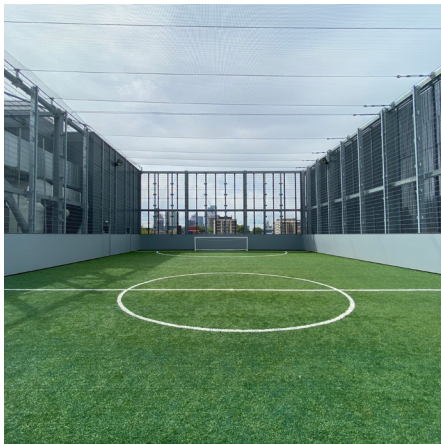

Britannia Leisure Centre is a new multi-sport community complex. A key driver for the client was that the building should have a compact footprint. This was achieved by stacking the facilities, creating a rooftop MUGA with tennis courts and 5-a-side football pitches.

Philip Glanville, Mayor of Hackney, has said, *'I am so proud that we have delivered one of London's best leisure centres, with absolutely incredible facilities.'*

Architect: FaulknerBrowns
Main Contractor: Morgan Sindall
Client: Hackney Council

Categories: Wall Cladding & Security Screens
Product: Terra-34
Project: Britannia Leisure Centre

Lang+Fulton supplied the external grating panels for the Britannia Leisure Centre which surround the open-air pitches that crown the building and provide panoramic views of London.

These were made from their Terra-34 grating which features an anti-climb aperture. The narrow panels were designed to continue the architectural theme of the building's columns and vertical elements and were hot-dip galvanized before finishing in a graphite grey polyester powder coating to compliment the neutral palette of stone, concrete and glass.

In addition a grating screen was supplied to secure the upper levels of the stairway providing natural daylight and through visibility to the entrance atrium and cafe area.

The steel grating also conformed to the requirement for material durability and low maintenance which were requisite specification considerations.

The Britannia Leisure Centre has received multiple awards including Overall Building of the Year (New London Architecture). Peter Murray, Chair of the judging panel wrote, *'Britannia Leisure Centre is not just an excellent amenity for the local community, it is a fine piece of city-making and a public building of great presence - a first class piece of civic architecture.'*
