Compliant

The **RECESSED HEAVY DUTY STAIR NOSING - HPN2**

is a high-performance stair nosing designed for use in commercial and public buildings. It is specifically developed for staircases where a recessed nosing is required. The key specification information is shown above. This stair nosing ensures safe movement between levels, even in wet conditions. It can be used in low-light situations when fitted with photoluminescent tread. The design takes into consideration the Equality Act (formerly DDA) and building regulations best practices.

The **RECESSED HEAVY DUTY STAIR NOSING -**

HPN2 is compatible with various staircase construction methods, including concrete, timber, resin, and stone-clad steel. Its durable construction makes it suitable for high-traffic areas, such as stadiums, university buildings, and transport infrastructure.
