

MATERIAL DESCRIPTION & PROPERTIES

$\Delta L_w = 22\text{dB}$

Floating Screed

Impact Noise Reduction and Thermal Insulation Properties

Very Easy to Handle and Long Term Resilience

100% Recycled Material

Very Flexible

Product Description

Agglomerated recycled rubber resilient layer for impact noise insulation of floating screed.

Thermal Properties

Thermal Conductivity: 0,140 W/mK⁽¹⁾

⁽¹⁾ISO 8301

Physical and Mechanical Properties

Specific Weight ⁽¹⁾	Dynamic Stiffness ⁽²⁾	Tensile Strength ⁽³⁾	Recovery after 0,7MPa ⁽⁴⁾
650-750Kg/m ³	20MN/m ³	>350KPa	>80%

⁽¹⁾ASTM F1315 • ⁽²⁾ISO 9052-1 & ISO 7626-5 • ⁽³⁾ASTM F152 • ⁽⁴⁾ASTM F36

Acoustical Results

Thickness (mm)	$\Delta L_w(\text{dB})^{(1)}$	IIC (dB) ⁽²⁾
4	22	50
4/2	-	-
6	22	50
6/3	-	-
8	23	51
8/4	23	51
10	23	51
10/5	-	-

Others sizes available upon request

Acoustical Result

Test procedure according to ISO 10140-1:2010; ISO 10140-3:2010; ISO 10140-4:2010 and ISO 717-2:2013 standards.

$L_{n,r}$ - Normalised impact sound pressure level of the reference floor with the floor covering under test;
 $L_{n,ref}$ - Normalised impact sound pressure level of the Lab reference floor;
 ΔL_w - Impact sound pressure level reduction index of the covering under test, on a normalised floor;

Ref. Test Report	Thickness	$L_{n,r,w}(C_{l,r})$	$\Delta L_w(C_{l,\Delta})$
ACL 102/15	4mm	56 (2) dB	22 (-12) dB
ACL 101/15	6mm	56 (1) dB	22 (-12) dB
ACL 099/15	8mm	55 (1) dB	23 (-12) dB
ACL 168/15	8/4mm	55 (1) dB	23 (-12) dB
ACL 100/15	10mm	55 (1) dB	23 (-12) dB

TEST APPARATUS (ΔL_w & IIC)

Acoustical Result

Test procedure according to ISO 10140-1:2010; ISO 1040-3:2010 and ISO 10140-4:2010 standards. Normalised impact sound pressure level and IIC rating determined according to ASTM E492-09 and ASTM E989-06 standards.

L_{ref} - Normalised impact sound pressure level of the reference floor with the floor covering under test;
 $L_{n,ref}$ - Normalised impact sound pressure level of the Lab reference floor;

Thickness	IIC _c
4mm	50 dB
6mm	50 dB
8mm	51 dB
8/4mm	51 dB
10mm	51 dB

Physical and Mechanical Properties

LOAD DEFLECTION

CREEP DEFLECTION @ 0,0045MP a (% OF START HEIGHT)

Dynamic Stiffness

Test procedure according ISO 9052-1 and ISO 7626-5 standards.

Thickness (mm)	4	4/2	6	6/3	8	8/4	10	10/15
Dynamic Stiffness (MN/m ³)	52	32	44	25	38	23	37	20

Installation

01

Reinforced concrete slab

02

Vapor barrier

03

Agglomerated recycled rubber resilient layer with one face dimpled - U22 Profile

04

Concrete floating screed

05

Perimeter insulation barrier

06

Adhesive tape

07

Agglomerated recycled rubber resilient layer - U22

General Installation Instructions

The following installation instructions are recommended by Total Vibration Solutions, but are not intended as a definitive project specification. They are presented in an attempt to be used with recommended installation procedures of the flooring manufacturers and screed.

Room Conditions

Temperature > -5°C / Room moisture content < 75%.

Subfloor

All subfloor work should be structurally sound, clear and level. The moisture content of the subfloor should not be more than 2.5% (cm) by weight measured on concrete subfloors.

Perimeter Insulation Barrier

Install a perimeter insulation barrier vertically around the entire perimeter of the room with width equal to that of the floor build up. This is highly recommended in order to avoid lateral propagation of impact noise. The barrier must also be applied in the perimeter of pipes, ducts or any other component protruding from the floor. Spot adhere the strips to the wall using acrylic glue or a bead of silicone sealant.

Installation Instruction for Acousticork U22

Unpack the Acousticork U22 at least 24h before the installation and store it in the room where the installation will take place. Cut and trim the Acousticork U22 to the desired size to fit the installation. Apply directly over the subfloor. Always ensure that material is installed to fit the application avoiding the creation of waves in the material. In case of profile material, dimple side must face down.

Place the Acousticork U22 directly against the insulation perimeter barrier already installed. Proceed to cover the entire floor making sure that the joints are butted tight and use an adequate tape to fix it. After completion, the Acousticork U22 should cover the entire flooring area without gaps and with joints securely taped. A waterproof membrane (ex. Polyethylene foil) minimum 0.2mm covering the entire flooring area MUST be installed prior to the screed. Install it, minimum 150mm wide vertically and overlapping it, minimum 100mm. After completion, the insulation vapour barrier should cover the entire Acousticork U22 area without gaps. Never mechanically fasten the Acousticork U22 and/or the PE foil barrier with screws, nails or staples as this will severely diminish the performance of the insulation barrier.

Screed and Final Flooring

Cast a suitable screed over the loose laid PE foil previously installed over the product.

Always follow manufacturers recommended installation instructions.

For detailed installation instructions, please contact us.
