

CASE STUDY

School Sports Hall

Bryanston School, Dorset

PROJECT INFORMATION

Client: Bryanston School

Project Information

TVS supplied and installed an EN14904 compliant, point elastic, seamless polyurethane surface to the new sports hall. The product was chosen as it offered the best aesthetics, in keeping with the overall look of the brand new sports centre, while meeting and exceeding the sports performance requirements for the school's priority sports.

As this was a completely new build, TVS was able to construct from the ground up, incorporating damp-proofing and levelling screeds before the first of the 5 layers of the sports system was installed.

We also consulted with the school to customise the line markings in accordance with the school's elite sports programme.

The sports floor is now fully-compliant and suitable for indoor hockey, netball, volleyball, badminton, basketball, tennis and futsal.
